

# STANDARD INFLATION TOOL

## Product Description

The Standard Inflation tool is used for our dunnage Air Bags with Standard Valve (SV). This is our classic filling tool for PP woven and Paper air bags. Our special design of the valve adapter can easily be clipped on the air bags valve; the handle helps to hold the bag in position.

The valve adapter comes in two types of valve adapter - one with a flexible rubber tube (40cm), and one with a fixed steel pipe (20cm).

Any standard air pressure system can be connected to the airgun. An optional manometer shows the exact filling pressure.

The valve adapter is the simplest yet at the same time the most handy one in the market.

## Industries Served

- Logistics
- Engineering and Machinery
- Power and Refinery

## Key Features

- Designed to allow the valve adapter to be clipped on the air bag's valve easily
- Handle help to hold the bag in position
