

SLIP SHEETS

Product Description

Slip Sheets are cheaper, lighter, hygienic, wood free and 100% recyclable when compared to pallets. This will definitely help you to save cost and reduce the number of spoilt pallets.

How Does It Work?

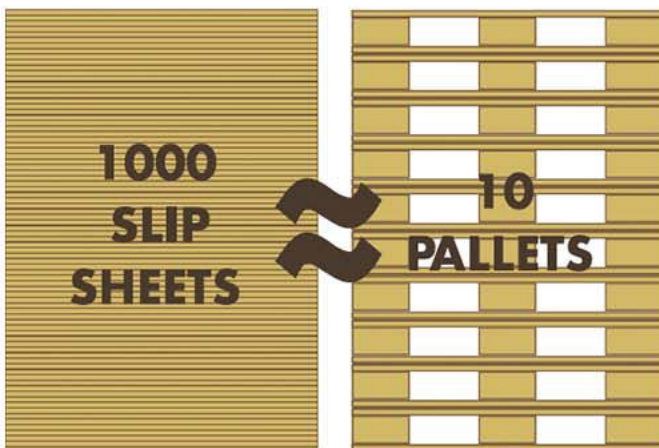

After placing a Slip Sheet on the floor, you may continue handling your goods like you have done before. When you are ready to move the goods into a container or truck, a special device is required to grab the Slip Sheet and load it onto the transportation vehicle. This allows the pallets to remain at the warehouse and you will be able to reuse them without having to transport them back.

Key Features

- Reduces the cost of materials, freight, labour, repair, storage and disposal
- Environmentally-friendly, wood-free, hygienic and 100% recyclable
- Compatible with standard forklifts outfitted with Push-Pull attachments, rollerforks and modern conveyor systems
- Ideal for both domestic and international shippers
- Different thickness and strengths of Slip Sheets available to cater to different needs
- Slip Sheets are coated with PE coating for more protection against humidity

Industries Served

- Logistics
- Engineering and Machinery
- Power and Refinery

How To Use Slip Sheets?

1. Place a Slip Sheet on top of a Wooden Pallet.
2. Place the items on top of the Wooden Pallet and Slip Sheet.
3. Use a regular forklift truck to handle the Pallets inside your warehouse as you have done in the past.
4. When transporting the goods in a container or truck, a special attachment is required to pull the Slip Sheet and load it onto the vehicle.

How Do I Handle Slip Sheets?

Slip Sheets require the usage of a special attachment at both the sending and receiving company. This unique attachment is simple to use and will work with any standard forklift truck. This attachment is cost-effective and worth the investment because it saves material costs.

Options For Hydraulic Systems:

You can get a Push-Pull device from your nearest forklift truck supplier. In less than a minute, the device can be attached to a forklift and its hydraulic system.

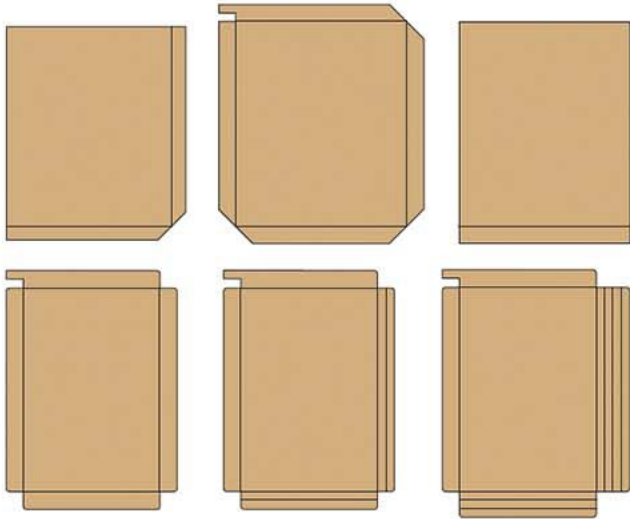

Push-Pull device

Printing Of Slip Sheets

Slip Sheets can be printed according to customer requirements.

Standard Size

There are standard sizes of Slip Sheet models available according to normal pallet sizes that are able to cater to own individual needs.

Durability Of Slip Sheets

Solid Slip Sheets are extremely tough due to their strong construction. Slip Sheets can withstand even the roughest handling and heaviest loads and are manufactured according to ISO 9001 standards.
